Revised March 16, 2005

TO: Barbara O'Grady, CDPHE

FROM: Victor Ketellapper, USEPA

SUBJECT: December 2004 Monthly Progress Report on the Remedial Action at the Vasquez Boulevard/Interstate 70 Superfund Site, Operable Unit 01

A handwritten signature in black ink, appearing to read "VKT" followed by a stylized flourish.

This monthly progress report was prepared and submitted to the Colorado Department of Public Health and the Environment as required in the *Superfund State Contract for Remedial Action Implementation, Vasquez Boulevard/Interstate 70, Operable Unit 01*. The report describes the work completed during the preceding month for each activity, a summary of expenditures, a summary of change orders and claims, and a description of whether the project is on schedule and within budget, and an estimate of variances expected at the project completion.

### **Activities Completed During the Month**

The following is a summary of the activities completed for each component of the remedy during the month. A summary of the funds obligated and the expenses that have been paid during the month for each component of the remedy is found in the attached table.

#### Soil Removal and Replacement

##### Status of Soil Removal Cleanups

Properties Completed in 1998 (Time Critical Removal Action)	18
Properties Completed in 2000 (Time Critical Removal Action)	31
Properties Completed in 2003 (Non-Time Critical Removal Action)	133
Properties Completed in 2004	326
Total Properties Completed	508
Estimated Cleanups Required	853

- Cleanups conducted prior to signing the State Superfund Contract (SSC) were completed as part of the EPA Funded Removal Actions.
- Property owners were contacted to obtain access for the clean up and develop restoration agreements.
- Contractor completed construction for the year. Anticipate restart of soil removals in February 2005.
- Working Group Meetings are to begin in January, 2005 on an every other month basis. A contract for a facilitator to manage these meeting is being prepared.
- A list of all the properties that the soil removal has been completed is attached to this monthly report.

### Community Health Program

- Two community testing biomonitoring clinics for lead and arsenic were conducted in December.
- Training of Community Health Workers planned for January, 2005.
- Community education activities to begin in January, 2005.

### Soil Sampling

- Sampling residential properties were conducted.
- Updated site database.

### **Change Orders and Claims**

None

### **Project Status**

The remedial action at Operable Unit 01 of the Vasquez Blvd/Interstate 70 Superfund Site is planned to be completed on September 30, 2006. The budget with contingency is \$26 million. The project is currently on schedule and within budget.

### **Variances Expected**

The Consent Degree with Asarco concerning their liability for Operable Unit 1 of the VB/I70 was reached. The consent decree was lodged in Federal Court in October. The agreement will allow EPA to permanently place excavated residential soils on the ASARCO Globe Plant. The VB/I70 Site soils to be placed on the Globe Plant are to be managed by ASARCO under the guidelines established by the State of Colorado for the ASARCO Globe Plant Superfund Site Cleanup. In addition, ASARCO will conduct soil remediation at 100 properties located within the VB/I70 Site.

### **Background**

The VB/I70 Site covers an area of approximately four and a half square miles in north-central

Denver, Colorado. For the purpose of investigation and remediation, the site has been divided into three operable units. OU1 is composed of a number of the City and County of Denver neighborhoods that are largely residential, including Swansea/Elyria, Clayton, Cole, portions of Globeville and a northern portion of Curtis Park. Approximately 4,000 residential properties are located within OU1.

The Record of Decision (ROD), signed on September 25, 2003, selected the remedy for OU-1. The remedial action selected for this project includes the following components:

1. Removal and replacement of soils on residential properties that the action level of lead or arsenic has been exceeded. The soil action levels selected in the ROD are 400 parts per million (ppm) and 70 ppm, respectively. The remedy also allows for the abatement of exterior lead based paint to prevent the recontamination of soils that have been remediated.
2. Conducting a Community Health Program during the duration of the soil cleanup activities.
3. Soil sampling of residential properties that have not been adequately evaluated for lead and arsenic.

#### Soil Removal and Replacement

Soil removal and replacement will occur at properties that have levels of lead and/or arsenic in the soil greater than the action level as described in the ROD. For properties which soil removal is conducted, all accessible soil will be removed to a depth of 12 inches. The excavation areas will be backfilled with clean soil, and yard features will be restored to the extent practicable, in consultation with the property owner. All excavated soils will be transported to an acceptable receiving facility.

Soil removal and replacement will include the following activities:

1. Access Agreements and Property Owner Authorization
2. Property Specific Design
3. Evaluation of Exterior Lead Based Paint
4. Supplemental Sampling of Garden Areas
5. Lead Based Paint Abatement if Needed to Protect the Soil Replacement Remedy
6. Soil Removal
7. Soil Transportation and Disposal
8. Backfill and Restoration of Excavated Areas
9. Post Construction Maintenance
10. Follow-Up Activities

A detailed description of each of these activities is found in the "Remedial Design Work Plan for Soil Sampling and Remediation Program" dated March 2003.

### Community Health Program

The Community Health Program consists of community and individual health education, a biomonitoring program to measure urinary arsenic levels and blood lead levels in children, and a response program that includes the necessary follow-up environmental sampling, home investigations, and referral to programs available to conduct response actions. The first element will address risks to area children from sources of lead. The second element will be designed to address children with soil pica behavior, to reduce their risks to arsenic in soil above 47 ppm. Participation in the program will be voluntary. The Community Health Program will be implemented on an ongoing basis until the residential soil removal portion of this remedial action has been completed.

The "Community Health Program Design Work Plan" dated March 2003 provides guidelines for implementing the Community Health Program. Specific actions conducted as part of the Community Health Program will be tailored to each of the neighborhoods within the Site.

### Soil Sampling

A program of on-going sampling will be implemented for lead and arsenic at all residential properties within the Site that have not already been adequately tested. This sampling program will continue through the completion of the soil removal portion of this remedy.
